Ria & Mia

Big Lessons. Little Stories.

...

Niko lived near the roots of the tall tree in a quiet corner of the forest. He spent his days collecting seeds and dodging raindrops. But what he loved most was watching the world. He watched how leaves always fell in spirals, how owl hoots echoed three times, how the sun rose, warmed, then cooled, like a song with perfect timing. He started writing things down.

...

He made tiny notebooks out of bark and berry juice ink, three star blinks, six cricket chirps, nine ripples in the pond, patterns, but no one else cared. You think too much? His cousin Nina sighed. Can't you just chase beetles like a normal mouse? Even his parents worried. Don't get lost in your imagination, Niko. There's real work to do. And for a moment, Niko almost agreed.

...

Until the night he met someone who changed everything. The stars were soft and the wind was quiet. Niko sat alone, tracing lines in the dirt with his tail. That's when a low, steady voice said, Still, listening, little one? Niko jumped. Above him sat Orion the Owl, feathers streaked with silver, eyes like moonlight. You were watching me, Niko squeaked. Always, said Orion. You've been noticing what others miss. That's rare.

...

Niko's whiskers twitched. Do you think the patterns mean something? Orion nodded slowly. Everything in this forest follows a rhythm, even your heartbeat. He tapped the tree bark gently. Thump. Thump. Thump. But if the pattern is so important, Niko asked, why don't others hear it? Because they're waiting for it to shout, said Orion. He leaned closer. But the pattern doesn't shout. It whispers.

...

From that day on, Niko listened even harder. He began to feel when things were out of rhythm. He sensed when the rain was coming by how the crickets slowed down. He could guess where nuts would fall by the spiral shape of the breeze. And one night, when a thunderstorm rolled in, he followed the lightning's rhythm. Three flashes, six rumbles, nine seconds to safety, and found a hidden cave just before the flood began. The others were amazed.

...

How did you know, Nina gasped. I listened, said Niko. He became the mouse others came to when things felt strange or uncertain. But he never claimed to have all the answers. He just smiled and said, the pattern is always there. You just have to feel it. Just like Niko, Nikola Tesla paid attention to things most people ignored. He was a real inventor and scientist, born in 1856, who imagined machines before they existed and dreamed about invisible waves of energy.

...

He believed the world had a hidden rhythm. And if you listened closely, you could discover incredible things. Tesla once said, if you want to find the secrets of the universe, think in terms of energy, frequency and vibration. He thought certain numbers, three, six and nine, might be part of a cosmic code. And while no one fully understands that mystery yet, it's OK to wonder, to imagine, to listen.

...

Because maybe, just maybe, the universe still whispers, and you're just the right kind of listener to hear it.

THE LITTLE KEY
...

Looking closely is like magic. You can notice
so many things!

NOTICE THE PATTERNS

A little mouse learns to notice the gentle patterns all around him — and finds wonder in the world's quiet rhythms. A cozy bedtime story about awareness.

For quiet, observant kids — a reminder that noticing things is a real superpower.

Big Lessons. Little Stories.
